Dear Beijing Lisheng Cardiovascular Health Foundation:

We are pleased to invite **one Chinese Cardiologist** to become international cardiology fellows of Osaka Saiseikai Nakatsu Hospital, Japan from **June 1st to August 29th of 2023**. The program will consist of daily hospital training, lectures, discussions and shall be organized and facilitated by the physicians of our department.

This program focuses on the imaging and physiology oriented percutaneous coronary intervention. The ultimate goal is for you to be able to apply what you have learned in our cathlab to the procedures you perform back in your country.

Hopefully the new technical approaches you acquire to specific lesion subsets such as left main trunk, tortuous or bifurcation lesions will help you treat these patients in a more effective and appropriate manner. The experience gained here shall guide you to choose the best available devices as you will be able to select accordingly depending on the characteristics of each tool. Being aware of and integrating the latest indications, learning how to interpret evidence and guidelines supporting cardiac imaging modalities such as, OCT and FFR, engaging in discussion regarding new techniques and technologies are just a handful of skills we would like for you to obtain through this program. At the same time, we look forward for you to take part in sharing your invaluable experience as a cardiovascular interventionist in China and how you handle the everyday challenges you face in your practice.

We sincerely hope that you will be an active participant of this training program and that you are as excited as we are to become a valuable member of Osaka Saiseikai Nakatsu Hospital. Thank you for your consideration in coming to Japan and we look forward to welcoming you to Osaka Saiseikai Nakatsu Hospital.

Best Regards,

Junya Shite

President

Osaka Saiseikai Nakatsu Hospital
